Medical Report

PATIENT	DOB
Servác Kocák	16/09/1959
DATE OF VISIT / ADMISSION	DISCHARGE
03/06/2026	—
DIAGNOSIS	ICD-10
Periapical dental abscess	K04.7

History

No relevant previous illnesses. No regular medication.

Findings and treatment

Examination revealed localized swelling and tenderness in the mandibular right posterior region with mobility of the affected tooth. Radiographic imaging showed a radiolucency at the apex of the tooth, confirming the periapical abscess. No systemic signs of infection were present. Incision and drainage were performed, followed by administration of antibiotics and analgesics. Patient was advised to return for root canal therapy and follow-up in one week.

Attending physician: József Szabó
